

# What's the problem with fats, oils and grease?

**When fats, oils and grease are put down the drain, they can clog sewer pipes.**

**Sewer clogs can cause untreated sewage to backup and overflow into your home, or business, onto the street and even into storm drains that lead to the ocean.**

**Sewage spills can spread disease and harm the environment. Spills can also be expensive to clean up, and can lead to expensive fines or closures for businesses like restaurants.**
